

# Installing Solar Panels – The Facts

**Tuesday 1<sup>st</sup> July 2025 7pm-8.45pm - On Zoom**

**A talk and discussion by Tom Mastin of Smart Homes Electrical answering all the questions for those who are thinking about installing solar panels.**

- What are the payback times now electricity has gone up in price and solar panels are cheaper?
- Should I rent my roof space to a company to pay for, install and manage my installation or own them myself?
- Is my type of roofing suitable?

Once you have decided to install, there are other considerations before installing them:

- How many panels can be installed and where to site them?
- Should I also install a battery at the same time? How should I use it to save money? What should I do when the sun doesn't shine?
- What about the grid supply to my property?

Also tariff and system integration issues:

- What is the smart export guarantee (SEG)? How much can I export? How do I get the best deal?
- How does installing a heat pump and/or an EV charging point affects my decisions?
- How should I control and integrate my solar, battery, EV charging, tariffs, etc?

There will be plenty of time for your questions.

The Hope Valley Climate Action Energy Group looks forward to you joining us for what should be an interesting evening. **Please register on Ticket Tailor.**
